

# AI Insights Risk Disclosures

Last updated 21 January 2026

These Risk Disclosures are specific to AI Insights and supplement Altify's Terms of Service and Privacy Policy. By using AI Insights, you agree to these disclosures in addition to those terms. If you have questions about liability, warranties, or dispute resolution, please refer to our [Terms of Service](#).

## 1. Introduction

AI Insights is an informational analysis tool offered by Altify. It is powered by the Google Gemini AI ® model. The tool interprets natural language inputs and generates outputs by synthesising real-time market data, analyst reports, and quality-checked news feeds.

## 2. Informational Purposes Only

Everything you see from AI Insights is for informational and educational purposes only. Even though the tool may analyse your specific portfolio holdings to provide "Summarised Drivers" or "News of Upcoming Events," this output is not individualised investment advice or a recommendation from Altify.

We do not guarantee the accuracy, completeness, or relevance of the output. The tool is provided "as is" and using it is at your sole risk. You should independently verify any information before acting on it. Do not rely on AI Insights as financial, legal, or professional advice.

## 3. Core Risks

- **Accuracy:** While we source data from trusted inputs and research notes, the output may still contain material inaccuracies. It might not reflect the most current information.
- **Hallucinations:** AI models, including Google Gemini®, can generate incorrect or misleading results known as "hallucinations". The AI might produce responses that look plausible but are factually incorrect or unrelated to your query.
- **Data Limitations:** The AI analyses large amounts of external data. Despite our use of quality-checked feeds, this data could be flawed, delayed, or unavailable.

- **Oversimplification:** One of the goals of AI Insights is to explain complex terms (like "on-chain activity") in plain English. In doing so, the AI may strip away necessary nuance, leading to an oversimplified view of a complex risk or situation.
- **Bias:** AI models learn from datasets that may contain historical biases. These biases can affect the fairness and quality of the output.

#### 4. Investment Decisions

The output is not a recommendation to buy or sell a security. It does not consider your individual financial goals, risk tolerance, or detailed financial circumstances.

You must do your own research. You are solely responsible for any investment decisions you make based on AI Insights. Before investing, carefully consider if the investment is suitable for you.

#### 5. Performance & Hypothetical Scenarios

If the tool displays historical performance or explains why a portfolio moved in the past, remember that past performance does not guarantee future results. Any forward-looking statements or alerts regarding upcoming events are based on current data and may change.

#### 6. Technical & Third-Party Reliability

AI Insights is powered by Google Gemini, a third-party AI model. While we select reputable providers, Altify does not control Google's technology. System errors, bugs, or downtime originating from Google or other data providers may affect AI Insights' accuracy and availability.

**Important:** If Google's model produces an error that affects you, your contractual relationship is with Altify, not Google. Altify remains responsible for AI Insights subject to the limitations of liability set out in our Terms of Service.

If Google discontinues Gemini or makes material changes, Altify may need to transition to an alternative AI provider or temporarily suspend AI Insights. We will notify you of any such changes through your account.

The tool may become temporarily unavailable due to disruptions outside our control, including Google service outages, data feed interruptions, or infrastructure issues. Altify does not guarantee uninterrupted access.

#### 7. Your Data & Privacy

When you use AI Insights, your queries and portfolio information may be transmitted to Google Gemini for processing. We use enterprise-grade Google services designed to protect your data, but you should be aware that your information is processed by a third-party AI provider. For full details on how we collect, use, and protect your information, please review our [Privacy Policy](#).
